## What is En.Tra?

You can track the access and exit of employees and guests using En.Tra (Entry Tracker), a simple and intuitive web application that runs on Android systems.
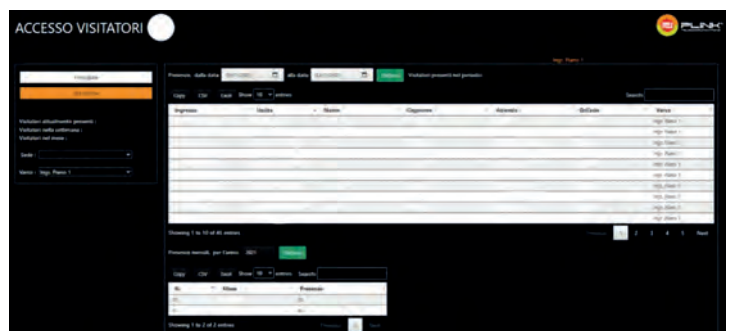

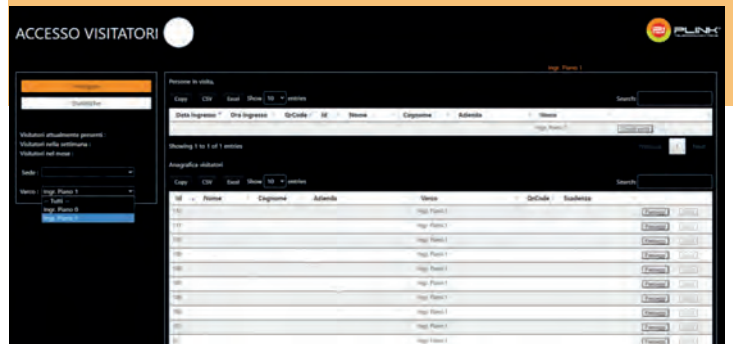

With En.Tra you can manage one or more locations, and for each location one or more access gates. This means many devices, but just one server.

## With En.Tra, your company can stay ahead of the competition

For companies that wish to maintain control over their internal presence from anywhere, anytime, En.Tra is essential. Thus, paper is not wasted.

En.Tra is indispensable in the event of a fire, earthquake or other emergency situations: it allows you to monitor, by accessing the dashboard from any device, anywhere, who is still inside the building at that moment and who is already safe.

En.Tra is a useful ally in the prevention of infections, since, in addition to verifying the validity of the green passes, it is possible to inform those who have been in the company of any ongoing health situation. This is done by displaying the accesses that occurred in a specific period of time, filtered by company and gate.

## How does it work

Upon arrival, via En.Tra, the guest can announce himself and be welcomed by the desired person, or register independently thanks to the extremely intuitive interface. The system will save the date and time of entry into the company and will notify you of access in real time via email notifications. To register an exit, simply scan the QR code given upon entry.

With EnTra you can also export the attendance register in PDF, Excel and CSW formats.

## QR code validity

The duration of each QR code can be customized from the dashboard, from which you can also force the visit to end at any time.

## Integrations and customizations

Advanced home automation operations can be performed with En.Tra with the integration of intelligent building systems.

Your logo and brand colors can be incorporated into En.Tra to ensure the user experience matches your brand style. It is also possible to customize the fields: ask only the questions you think are relevant.

## Privacy

Guest privacy is guaranteed: they are unable to see other guests' access, and they will accept any privacy restrictions you place on them.
